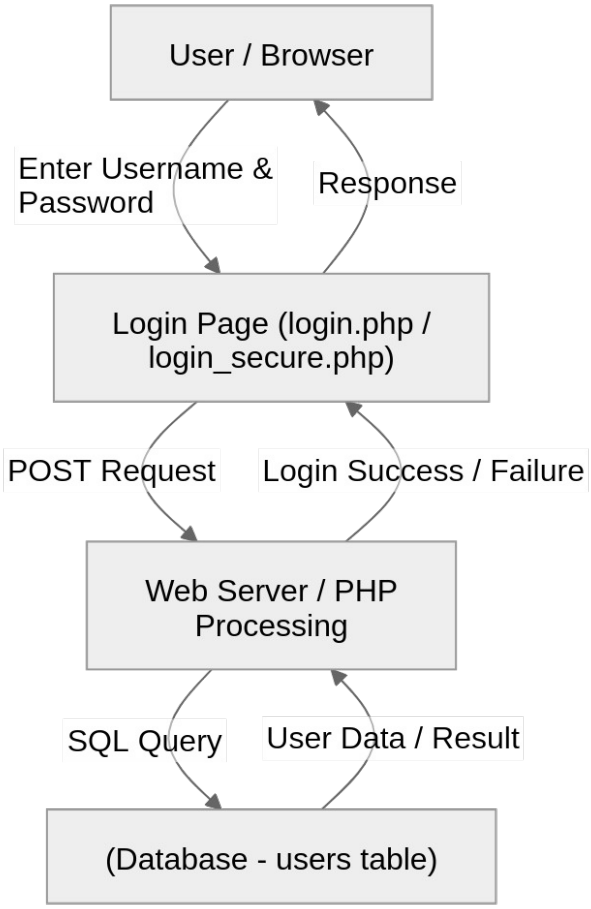
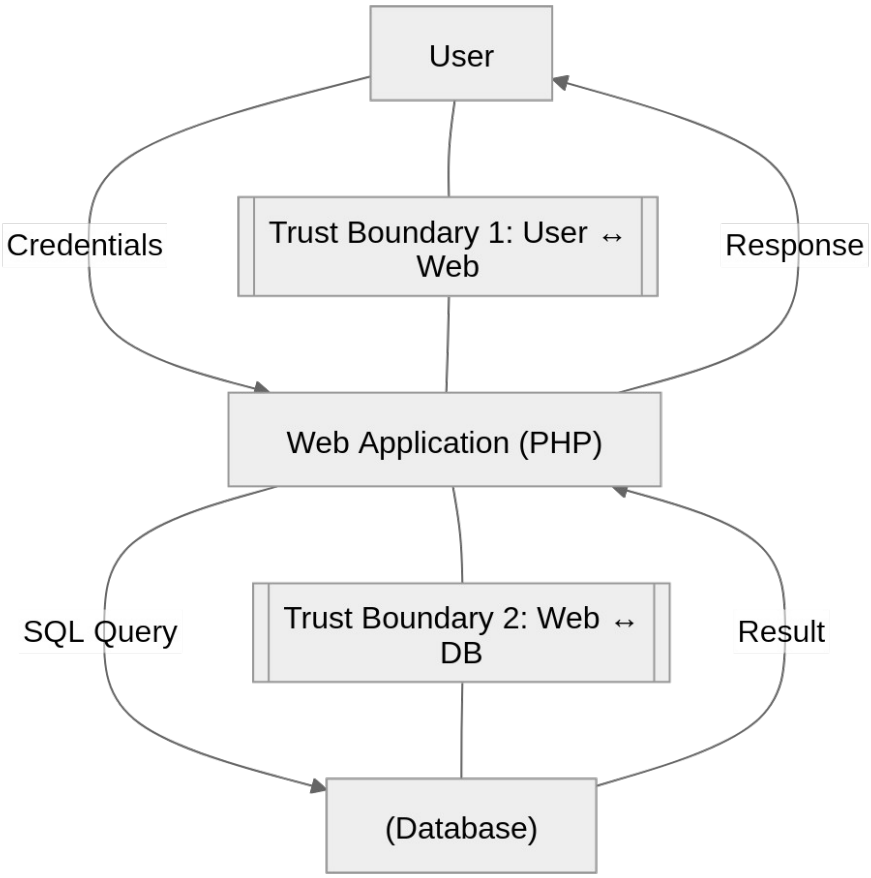
1. Data Flow Diagram (DFD)



2.Trust Boundaries



STRIDE Category	Threat in Your Login Page	Example (From Your Code)	Mitigation
S – Spoofing	Fake user identity	Attacker logs in using stolen credentials	Use authentication, hashing passwords
T – Tampering	Data manipulation	SQL Injection in `login.php`	Use prepared statements (`login_secure.php`)
R – Repudiation	User denies actions	No logging of login attempts	Maintain logs
I – Information Disclosure	Sensitive data exposure	Plaintext password comparison	Hash passwords (bcrypt)
D – Denial of Service	System overload	Repeated login attempts	Rate limiting / CAPTCHA
E – Elevation of Privilege	Unauthorized access	Bypass login using `' OR '1'='1`	Input validation + prepared statements

3. STRIDE Threat Model Table
